Generalizing this, we can suppose that the distribution of boxes specified by an exponent  $a$  is fractal with the  $a$ -dependent fractal dimension  $f(a)$ . Hence, denoting the number of boxes with a by  $N(a)$ , we have the relation  $N(a) \propto L^{1-f(a)}$ , or  $f(a) = \lim \log N(a)$ .

Fractals and Their Applications in Condensed Matter Physics FRACTALS CONDENSED MATTER IN PHYSICS This subsection is a compendium of those fractals which are most frequently discussed in the literature of condensed matter physics. The more familiar examples of fractals, such as the coastlines, the terrain of mountain ranges, the pock-marked surface of the moon, the distribution of matter in the universe, etc., will not be discussed.
